Understanding the Nikon F60's Key Features

The Nikon F60 boasts several features that make it a user-friendly and effective 35mm SLR, particularly for beginners. Its automated exposure modes simplify the process of taking well-exposed photographs, reducing the technical hurdles often associated with film photography. Understanding these features, as detailed in your Nikon F60 manual, is key to mastering the camera.

- **Programmed Auto Exposure (P):** This mode automatically sets both aperture and shutter speed for optimal exposure. It's a great starting point for beginners, allowing them to focus on composition and subject matter.
- **Shutter-Priority Auto Exposure (S):** In this mode, you select the shutter speed, and the camera chooses the appropriate aperture.

This is beneficial for freezing action (fast shutter speed) or creating motion blur (slow shutter speed). Understanding shutter speed and its impact on your images, as explained in your Nikon F60 manual, is crucial.

- **Aperture-Priority Auto Exposure (A):** Here, you choose the aperture, and the camera determines the corresponding shutter speed. Aperture affects depth of field – the area of your image that's in focus. Refer to your Nikon F60 manual for a clearer understanding of aperture and its effects.
- **Manual Exposure (M):** This mode gives you complete control over both aperture and shutter speed, allowing for creative control and fine-tuning of exposure. This is where the true depth of the Nikon F60's capabilities, as outlined in your Nikon F60 manual, can be fully explored.
- **Built-in Flash:** The F60 features a reliable built-in flash, useful for low-light situations. The Nikon F60 manual provides detailed instructions on using the flash and adjusting its power.
- **DX Film Format Recognition:** The F60 automatically detects and sets the correct film format (DX-coded). This simplifies the shooting process and prevents accidental over-exposure.
