Questions might involve adjusting the equation based on various transactions, measuring your understanding of how each element is impacted. For example, you might be asked to calculate the impact of purchasing equipment with cash on the accounting equation.

Questions might require you to identify errors in a trial balance or create one from a set of transactions.
- **Adjusting Entries:** Many transactions require adjusting entries at the end of an accounting period to reflect the accurate financial position. These include adjustments for accruals, prepaid expenses, unearned revenue, and accrued expenses. Expect questions that necessitate you to prepare and understand the rationale behind adjusting entries.
