Software Troubleshooting:

- **Slow Performance:** This can stem from numerous causes, including malware, insufficient RAM, a full hard drive, or outdated drivers. Running a malware scan, upgrading RAM, deleting unnecessary files, and updating drivers can resolve this.
- **Software Crashes:** These might be caused by software conflicts, corrupted files, or outdated drivers. Reinstalling problematic applications, running a system file checker, and updating drivers can often resolve these crashes.
- **Boot Problems:** Issues booting into Windows can be resolved by troubleshooting the boot order in the BIOS, attempting a system repair, or reinstalling the operating system as a last resort.
