FAQ

Q1: What are adjusting entries, and why are they important?

A1: Adjusting entries are made at the end of an accounting period to update account balances and ensure that financial statements accurately reflect the company's financial position. They account for transactions that haven't been recorded during the period but affect the financial statements (e.g., accrued revenues, prepaid expenses). They're crucial for following accrual accounting, which matches revenues and expenses in the period they occur, regardless of when cash changes hands.

Q2: What is the difference between accrual and cash accounting?

A2: Cash accounting recognizes revenue when cash is received and expenses when cash is paid. Accrual accounting, used by most businesses, recognizes revenue when it's earned and expenses when they're incurred, regardless of cash flow. Accrual accounting provides a more accurate picture of a company's financial performance over time.

Q3: How do I prepare an adjusted trial balance?

A3: An adjusted trial balance is prepared after making all necessary adjusting entries. It lists the updated debit and credit balances of all accounts. The total debits should equal the total credits. It's a crucial step in preparing financial statements.

Q5: What are some common mistakes students make in Chapter 4?
