The implementation of Kassimali's approach to software structural analysis typically involves several stages:

1. **Requirements Analysis:** A clear understanding of the system's functional and non-functional requirements is essential.
2. **Structural Modeling:** Applying the appropriate modeling techniques (DFDs, CFDs, ERDs, etc.) to represent the system's structure.
3. **Analysis and Validation:** Carefully analyzing the created models

to identify potential problems and validating the models against the requirements.

4. Refinement and Iteration: Iteratively refining the design based on the analysis findings and ensuring the system meets the requirements.

5. Implementation and Testing: Developing the software based on the refined design and thoroughly testing it to verify its correctness and functionality.

This methodical approach ensures a structured and robust development process, minimizing the risk of errors and improving the overall software quality.
