Internally, the iPhone 4 housed a powerful A4 chip, offering a significant boost in processing power compared to its predecessor. This improved performance enabled smoother multitasking and better app functionality.

Furthermore, the inclusion of a front-facing camera enabled video calls via FaceTime, a feature that was novel at its launch. While lacking some of the advanced features of modern iPhones, the iPhone 4 offered a solid user experience, particularly in its speed and responsiveness. Considered by many to be the pinnacle of the "classic" iPhone design, it remains a popular choice for those who prefer a more compact and manageable device.

Navigating the iPhone 4 Interface: A User's Perspective
