This proactive approach was a major step forward compared to the reactive methods

of the past.

- **Streamlined Communication:** PDAs facilitated seamless communication between field workers, managers, and processing facilities. Instant updates on harvesting progress, quality issues, or logistical problems allowed for prompt responses and minimized delays. This improved coordination across the entire supply chain.
- **Optimized Resource Allocation:** By analyzing data on yield, soil conditions, and labor costs, managers could optimize resource allocation. This might involve adjusting harvesting schedules, allocating resources to high-yield areas, or implementing targeted interventions where needed. This efficiency led to cost savings and increased profitability.
- **Better Traceability and Quality Control:** PDAs allowed for precise tracking of tea from the plantation to the final product. This enhanced traceability was essential for maintaining consistent quality and responding quickly to any quality-related issues. Each batch of tea could be meticulously tracked, ensuring accountability and facilitating the identification of any potential problems.
