Understanding Exposure: Aperture, Shutter Speed, and ISO

The "exposure triangle" (aperture, shutter speed, and ISO) is fundamental to photography. The Canon Rebel T31 allows you to control these elements manually or through semi-automatic modes like Aperture Priority (Av) and Shutter Priority (Tv).

- **Aperture:** Controls the amount of light entering the lens. A wider aperture (smaller f-number) creates a shallow depth of field, blurring the background.
- **Shutter Speed:** Controls how long the sensor is exposed to light. Faster shutter speeds freeze motion, while slower speeds create motion blur.
- **ISO:** Measures the sensor's sensitivity to light. Higher ISO values are useful in low-light situations but can introduce noise (grain) into your images.

Experiment with these settings in different lighting conditions to understand their impact on your photographs. Your **Canon Rebel T31 instruction manual** will guide you through the settings menu.
